Modification from former edition.

INTRODUCTION

Variable displacement axial piston pumps swash plate design ideally suited for medium and high pressure open circuit applications. The compact design allows to be mounted directly on engine motors.

DISPLACEMENTS

From 14 cm³/rev (0.85 in³/rev)

To 84,7 cm³/rev (5.17 in³/rev)

PRESSURE

Max. constant operating pressure 280 bar (4060 psi)

Max. system pressure (relief valve setting) 315 bar (4568 psi)

Max. peak of pressure 350 bar (5075 psi)

SPEED

Max. 3500 min⁻¹

APPLICATION

Medium, high pressure

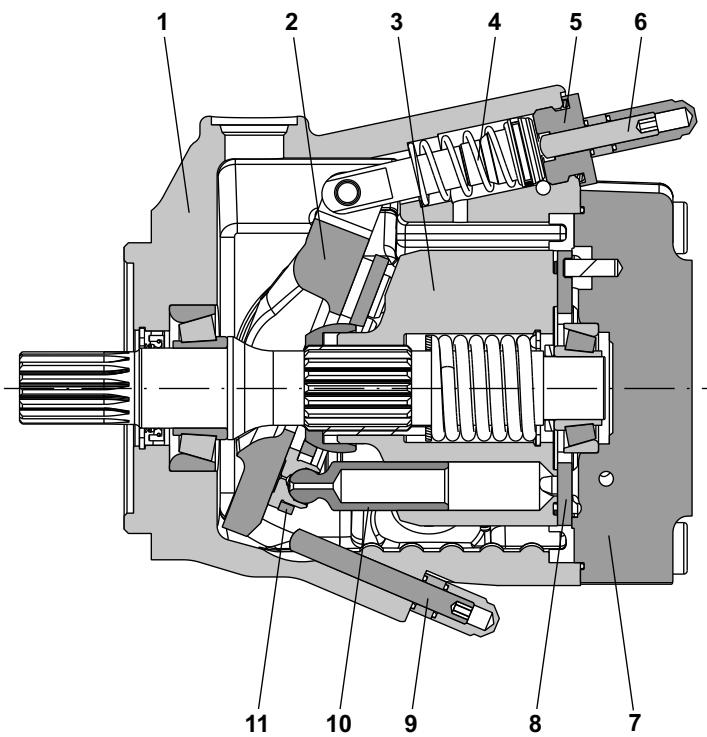

SECTOR

Mobile

TYPICAL APPLICATIONS

- Skid Steer Loaders
- Wheel Loaders - Backhoe Loaders
- Mini and Midi-Excavators
- Telehandlers
- Forklifts
- Windmills - Green Energy
- Tractors & Attachments

06/06/2020

- Compact design
- Longer service life
- Low noise emission
- Max. and min. displacement limiter
- Drive shaft bearing suitable for radial and axial loads
- Hydraulic and Electro-hydraulic displacement controls

GENERAL INFORMATION / INSTRUCTIONS

DIRECTION OF ROTATION

Clockwise or anti-clockwise defined looking at the drive shaft.

HYDRAULIC FLUID

Mineral oil based hydraulic fluid conforming to DIN 51524, fire resistant fluids and biodegradable fluids according to the technical data shown in the tables on pages 7 ÷ 9. The system should be designed to prevent aeration of the hydraulic fluid.

FLUID VISCOSITY

The fluid viscosity range for optimal use of MVP pump is between 15 and 35 cSt (77 and 163 SSU).

Functional limit conditions are:

max.: 1500 cSt (6818 SSU) at start up at minimum temperature of -25 °C (-13 °F) with straight and short inlet line.

min.: 10 cSt (58 SSU) at maximum temperature of 110 °C (230 °F)

FILTRATION

To ensure the optimal performance and the maximum life to the pump, the hydraulic fluid must have and maintain a fluid contamination within the values shown in the table below.

Working pressure bar (psi)	Δp < 140 (2030)	140 < Δp < 210 (2030)	Δp > 210 (3045)
Contamination class NAS 1638	9	8	7
Contamination class ISO 4406:1999	20/18/15	19/17/14	18/16/13
Achieved with filter $\beta_{x_{(0)}} \geq 75$ according to ISO 16889	10 µm	10 µm	10 µm

Casappa recommends to use its own production filters:

STORAGE

The storage must be in a dry environment.

Max storage time in ideal conditions is 24 months.

The ideal storage temperature is between 5 °C (41 °F) and 20 °C (68 °F). No problem in case of temperature between -40 °C (-40 °F) and 50 °C (122 °F). Below -40 °C (-40 °F) please consult our pre-sales department.

INSTALLATION

Check that the maximum coupling eccentricity stays within 0,25 mm (0.0098 in) to reduce shaft loads due to misalignment. It is advised to use a flexible coupling suitable to absorb eventual rotational shocks. For applications with axial and radial loads exceeding published standards, consult our sales department. The direction of rotation of the pump must agree with the prime mover rotation. Before installation, the case of the pump must be filled with fluid.

LINES

The lines must have a major diameter which is at least as large as the diameter of pump ports, and must be perfectly sealed. To reduce loss of power, the lines should be as short as possible, reducing the sources of hydraulic resistance (elbow, throttling, gate valves, etc.) to a minimum. A length of flexible tubing is recommended to reduce the transmission of vibrations. Before connecting the lines, remove any plug and make sure that the lines are perfectly clean. Check that the drain line is dimensioned in a way to guarantee a case pressure lower than 1,5 bar (22 psi) absolute. The drain line must be connected directly (no filter, no valves, no oil cooler) to the tank and must terminate below the oil level. Check that the dimensions of the suction line guarantee a pressure equal or superior to 0,8 bar (12 psi). Inlet pressure less than 0,8 bar (12 psi) could cause an increase of noise emission, the decrease of the pump performances and a reduction of its life expectancy.

STARTING UP

Check that all connections are secure and that the entire system is completely clean. Add oil to the tank always using a filter. Bleed the air from the circuit to help the filling. Turn on the system for a few moments at minimum speed, then bleed the circuit again and check the level of oil in the tank. Gradually increase the pressure and speed of rotation up to the pre-set operating levels, which must stay within the stated limits as specified in the catalogue.

FOR VERY LOW TEMPERATURE

STARTING UP

We strongly recommend to warm up the oil before running the machine. If this is not possible, the warm up of the oil and of the pump should be carried out following these instructions:

- Start the pump in stand-by condition at minimum speed. Keep this working condition until the pump case reaches -20 °C (-4 °F)
- Increase slowly the displacement. Max pressure permitted: 50 bar (725 psi). The maximum permitted speed is strictly connected to the layout of the inlet circuit; check that there is no cavitation before increasing the speed.
- Keep this working condition until the oil temperature in the whole system is -10 °C (14 °F).
- Maximum pressure can be achieved from now on.
- Always check the outlet flow to prevent cavitation damage.

All the temperature are referred to oil with viscosity ISO VG 32 according to DIN 51 519.

SUGGESTIONS

To prevent cavitation at low temperature we suggest:

- To warm up the tank
- To pressurize the tank
- To oversize the inlet hose

MOUNTING POSITIONS

Standard pump is supplied with D1 drain hole open and D2, D3, D4 plugged (◆ if available).

Before installation fill the pump with hydraulic oil for at least 3/4 of the volume keeping it in horizontal position.

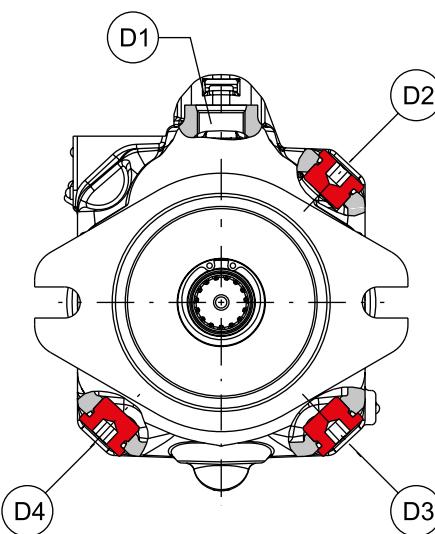

The pump can be mounted in a horizontal or vertical position. The highest of the case drain ports must be used to keep the required filling oil.

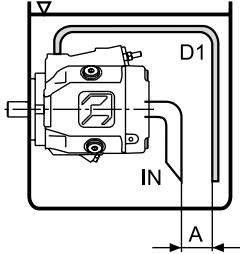

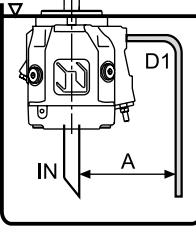

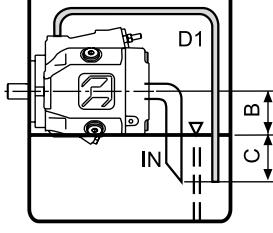

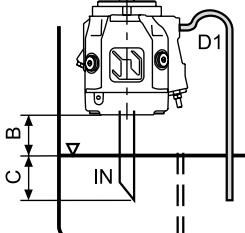

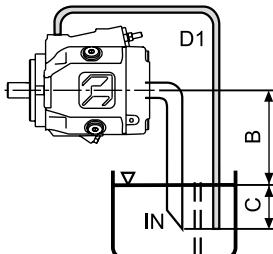

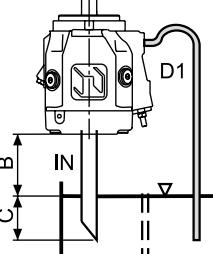

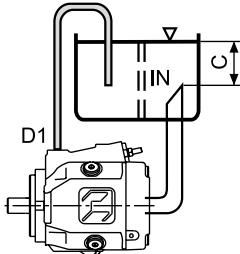

If D1 is not the highest drain port it must be closed by moving the plug from the hole chosen for the drain line.

The pump can be located above the oil level if the absolute pressure at the inlet port stays within the stated limits.

With exception of pump mounted below the oil level, we recommend to interpose a baffle plate between inlet and drain line.

To reduce further noise emission, we recommend to mount the pump below the oil level and avoid suction lines with sharp restrictions.

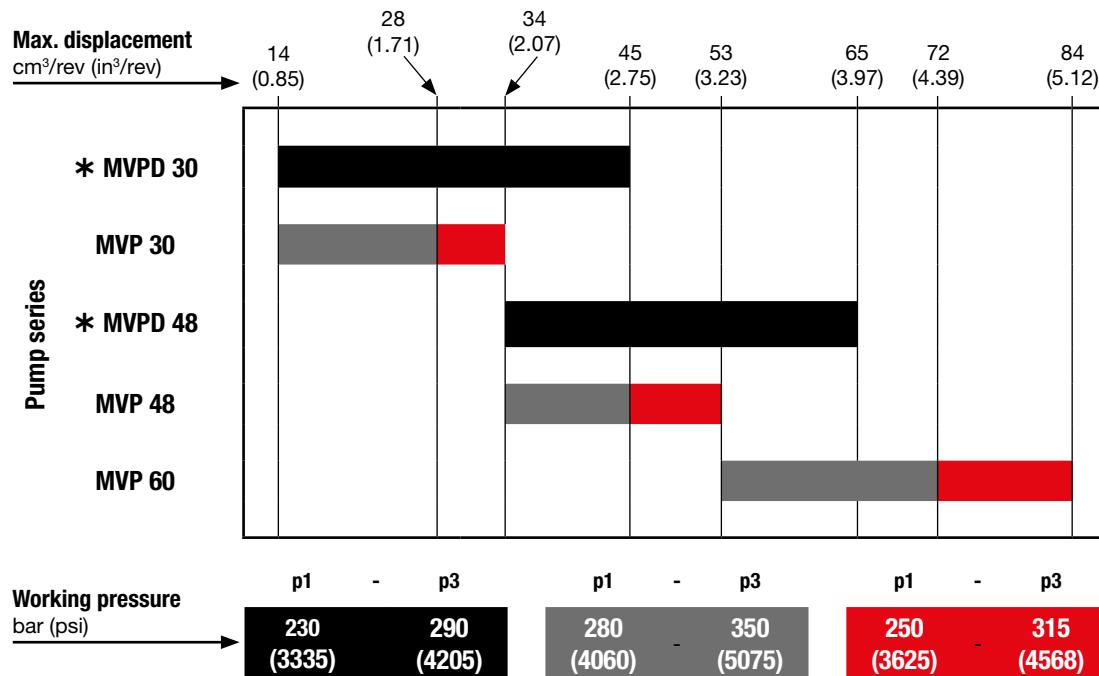

HORIZONTAL MOUNTING		VERTICAL MOUNTING	
	Arrangement inside the tank. Minimum oil level equal or above the pump mounting face. $A \geq 200 \text{ mm (7.874 in)}$		Arrangement inside the tank. Minimum oil level equal or above the pump mounting face. $A \geq 200 \text{ mm (7.874 in)}$
	Arrangement inside the tank. Minimum oil level below the pump mounting face. Min. inlet pressure= 0,8 bar abs (24 in Hg) $B \leq 800 \text{ mm (31.4961 in)}$ $C = 200 \text{ mm (7.874 in)}$		Arrangement inside the tank. Minimum oil level below the pump mounting face. IN= inlet line - D1= drain line - A= min. distance between the line - B+C= permissible suction height - C= line immersion depth

DISPLACEMENTS AND WORKING PRESSURES RANGE

MVP-MVPD Comparison

PRESSURE DEFINITION

p_1 Constant operating pressure
 p_2 System pressure (relief valve setting)
 p_3 Peak of pressure

The peak of pressure is the max pressure allowed and it corresponds to the overshoot of the relief valve.

Please note that both relief valve setting and overshoot must be lower than their limits.

If the relief setting is compliant but the overshoot is higher than the limit, the relief setting must be decreased until the overshoot is compliant to Casappa limit.

Please contact us for high frequency applications.

FEATURES

Technical data with mineral oil

HL or HLP mineral oil based hydraulic fluid to DIN 51524

	MVP60-84	80 ÷ 250 (1160 ÷ 3625)	250 (3625)

NOTES

Please contact us for more information.

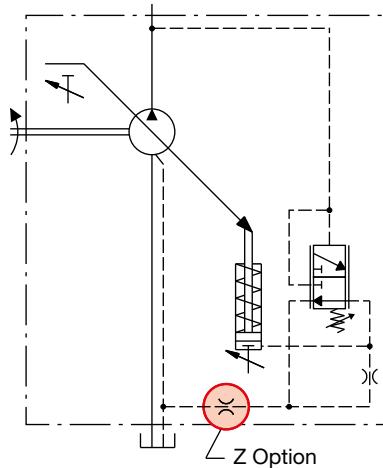

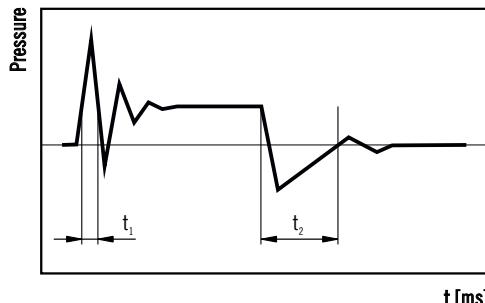

OPERATING CURVES

Curves have been obtained at the speed of 1500 min⁻¹ and oil temperature 50 °C (122 °F).

RESPONSE AND RECOVERY TIME

According to SAE J745 (using outlet pressure).

Z OPTION

Damping restrictor for critical applications.

In case of system instability or pressure oscillations, the additional damping restrictor slows down the pump control system, damping the regulation transients.

The pump recovery time increases.

The use of the damping restrictor must be evaluated and approved by Casappa technical sales department for the specific application.

REMOTE CONTROL

For remote pressure compensator LS3 see page 46.

05/10/2014

Pump type	Response time [ms] (off stroke)	Recovery time [ms] (on stroke)
MVP30	46	150
MVP48	48	150
MVP60	50	150

PRESSURE COMPENSATOR

RP1

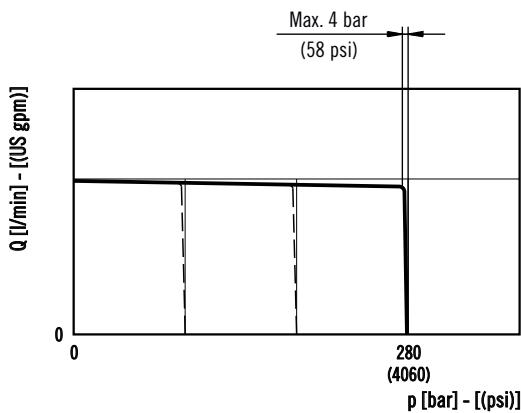

Regulates the pump displacement automatically to maintain the pressure below the fixed pre-adjusted limit.
 Designed to work at high frequency ≥ 2 cycle/min and/or at pressure > 280 bar (4060 psi).

NOTES

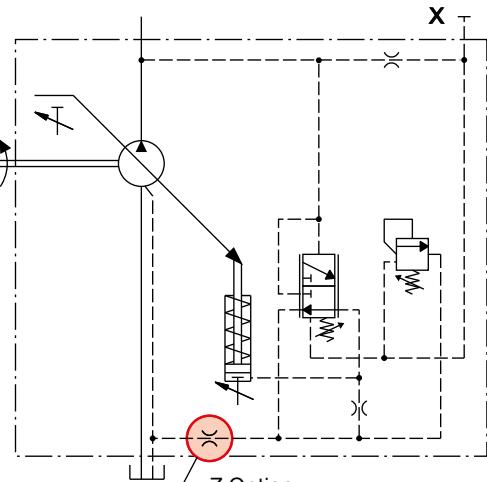

X: Load-sensing port. Dimensions at page 38 ÷ 40.
 Please contact us for more information.

OPERATING CURVES

Curves have been obtained at the speed of 1500 min⁻¹ and oil temperature 50 °C (122 °F).

DUAL SETTING PRESSURE COMPENSATOR

RP2

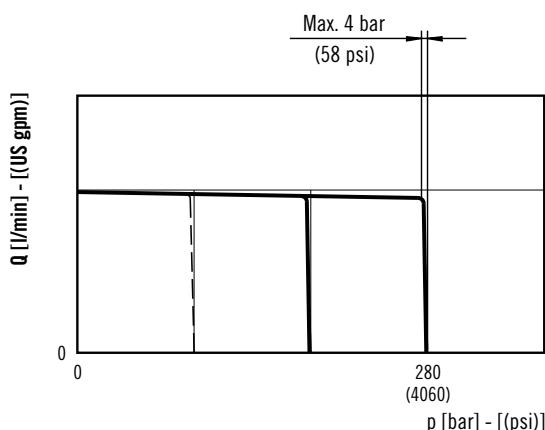

Regulates the pump displacement automatically to maintain the pressure below two fixed pre-adjusted limits.
The electrically piloted valve allows to switch between the two different limits.

NOTES

X: Load-sensing port. Dimensions at page 38 ÷ 40.
Connector: Standard type DIN 43650.
Please contact us for other connectors and more information.

OPERATING CURVES

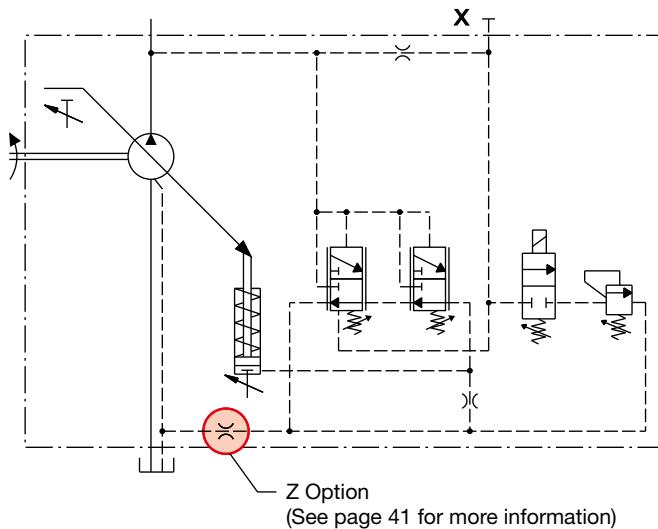

Curves have been obtained at the speed of 1500 min⁻¹ and oil temperature 50 °C (122 °F).

06/06/2020

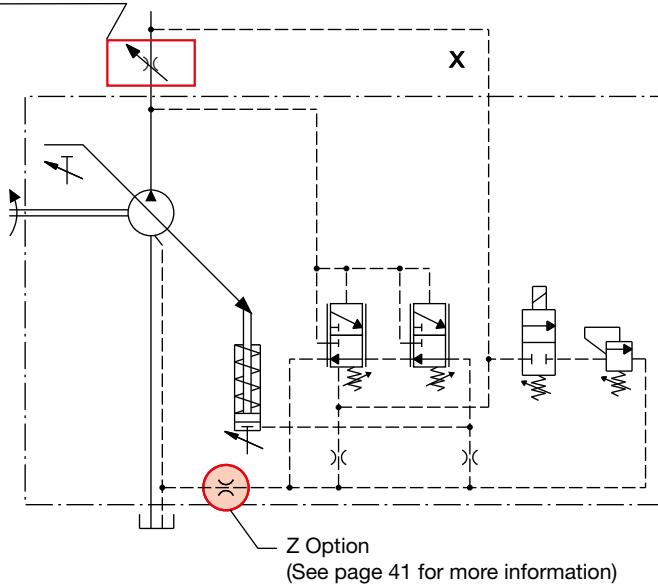

Valve code	Arrangement	Voltage
1	Normally closed	12 V DC
2	Normally closed	24 V DC
6	Normally open	12 V DC
7	Normally open	24 V DC

RP2

RP2 - LS2 (with flow control)

06/06/2020

PRESSURE ELECTRONIC COMPENSATOR PLUS ANGULAR SENSOR

PECA

Regulates the pump displacement automatically to maintain the pressure below the variable limit set through a command current signal. The swivel angular sensor converts the actual position of the swashplate into a voltage output signal that can be used for different purposes. This signal and the proportional relief valve allow to realise the following different control logics by means of an external control unit:

- Variable maximum pressure limiter
- Electronic flow compensator with variable setting (variable Load-Sensing)
- Electronic torque limiter with variable torque setting
- Power limiter
- Flow control
- Working e-modes

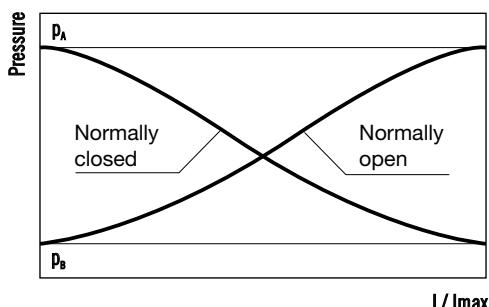

NOTES

Not available with MVP30.

X: Load-sensing port. Dimensions at page 38 ÷ 40.

Please contact us for more information.

ANGULAR SENSOR

FLOW COMPENSATOR (Load-sensing)

LS

Regulates the pump displacement to maintain a constant (load independent) pressure drop across a flow metering device. In the standard version the flow compensator is combined with pressure compensator.

Flow compensator type	Pressure compensator	Differential pressure setting range bar (psi)	Standard setting bar (psi)
LS0 (■)	RPO		
LS2 (◆)	RPO	12 ÷ 40 (174 ÷ 580)	14 (203)
LS3 (●)	RPO		

(■): Suggested when the directional control valve does not have the bleed function

(◆): Y is plugged. Suggested when the directional control valve has the bleed function

(●): For remote pressure control.

Pilot flow $\approx 1,3 \div 1,5$ l/min (0.34 ÷ 0.40 US gpm)

In standard setting conditions 14 bar (203 psi) the stand-by pressure is $15^{\pm 2}$ bar (218 $^{\pm 29}$ psi).

NOTES

X: Load-sensing port. Dimensions at page 38 ÷ 40.

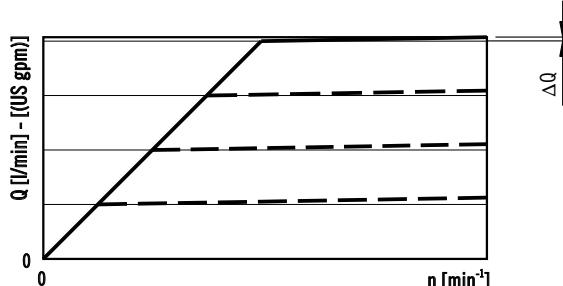

Available without pressure compensator RP.

Please contact us for more information.

OPERATING CURVES

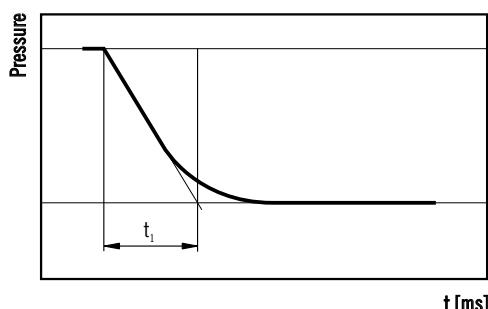

Curves have been obtained at the speed of 1500 min $^{-1}$ and oil temperature 50 °C (122 °F).

Curve at variable speed

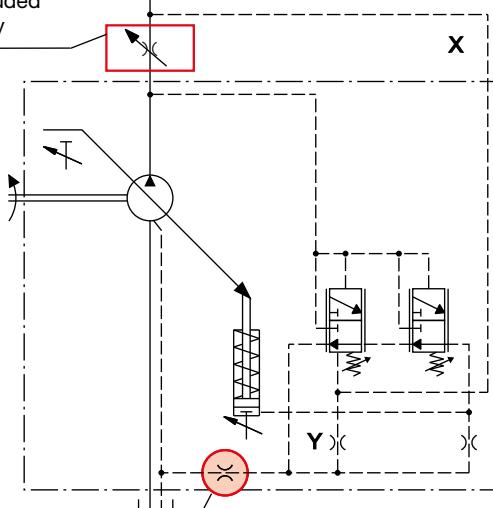

RESPONSE TIME

According to SAE J745 (using outlet pressure).

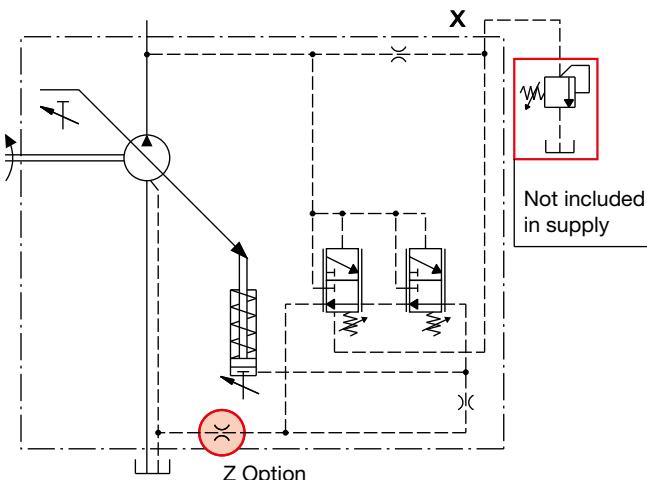

LS0 (Bleed open) - LS2 (Bleed closed)

Not included in supply

Z Option
(See page 41 for more information)

LS3 - Remote pressure compensator

Z Option
(See page 41 for more information)

ΔQ max

Pump type	I/min (US gpm)

MVP 48	1,7 (0.45)
MVP 60	2,5 (0.66)

t_1

Pump type	Response time [ms] (off stroke)
MVP 30	120
MVP 48	120
MVP 60	120

According to SAE J745 (using outlet pressure)

TORQUE LIMITER

RN

Regulates the pump displacement according to the system pressure, to maintain the pre-adjusted torque value and protect the prime mover from overload. To have the best torque limiter regulation, the pre-adjusted absorbed torque has to be higher than the value shown in the following table.

Pump type	Min. torque Nm (lbf in)	Min. power (●) kW (HP)
MVP30	45 (398)	7.1 (9.5)
MVP48	61 (540)	9.6 (12.9)
MVP60	97 (859)	15.2 (20.4)

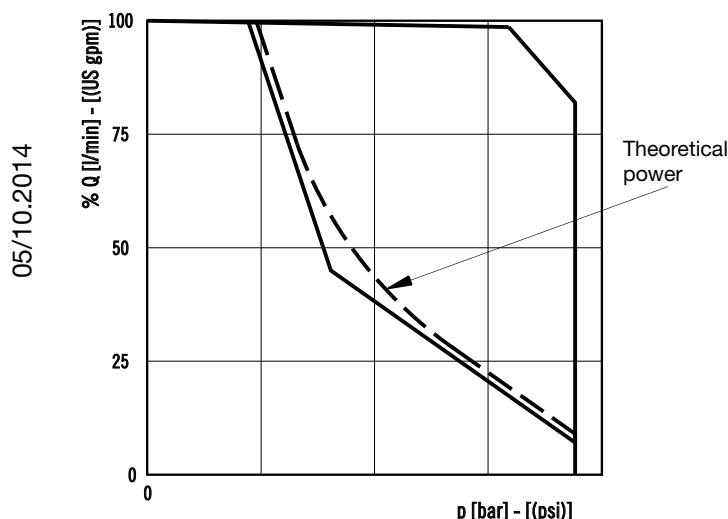

(●) @ 1500 min⁻¹

For lower torque setting values, the regulator limits the maximum working pressure to a value lower than the standard setting for the pressure regulator 280 bar (4060 psi). When ordering the torque limiter please specify the requested value of torque [eg. 70 Nm (620 lbf in)] or the requested power and speed [eg. 10 kW (13.4 HP) at 1500 min⁻¹].

NOTES

X: Load-sensing port. Dimensions at page 38 ÷ 40.
 Available without pressure compensator RP.
 Please contact us for more information.

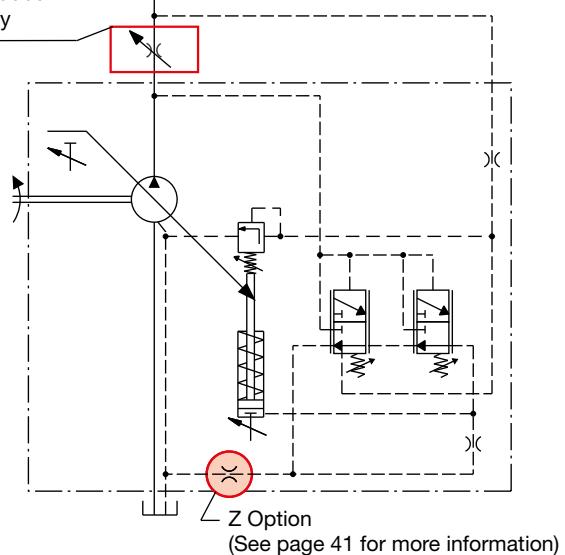

OPERATING CURVES

RN0 - Standard

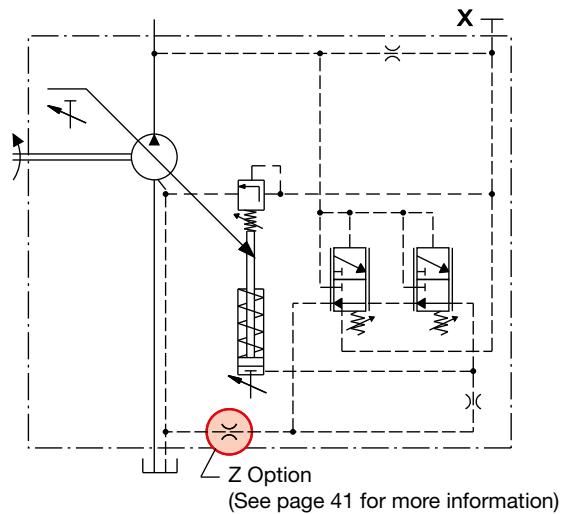

Torque limitation for closed center valve.

Not included
in supply

RN1 - Internal pilot

Torque limitation for open center valve.

DUAL SETTING TORQUE LIMITER

RN2

Regulates the pump displacement automatically to maintain the torque below two fixed pre-adjusted limits.
 The electrically piloted valve allows to switch between the two different limits.

Pump type	Min. torque Nm (lbf in)	Min. power (●) kW (HP)
MVP30	45 (398)	7.1 (9,5)
MVP48	61 (540)	9.6 (12,9)
MVP60	97 (859)	15.2 (20,4)

(●) @ 1500 min⁻¹

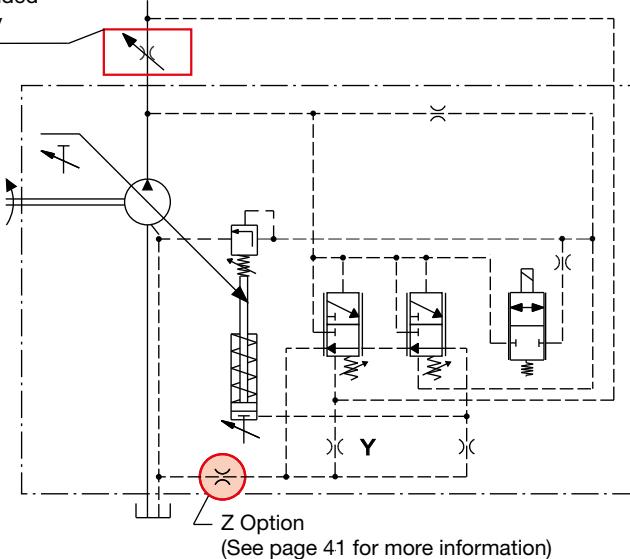

For lower torque setting values, the regulator limits the maximum working pressure to a value lower than the standard setting for the pressure regulator 280 bar (4060 psi).

When ordering the torque limiter please specify the requested value of torque [eg. 70 Nm (620 lbf in)] or the requested power and speed [eg. 10 kW (13.4 HP) at 1500 min⁻¹].

RN2-LS0 / RN2-LS2

For LS2 configuration Y is plugged.

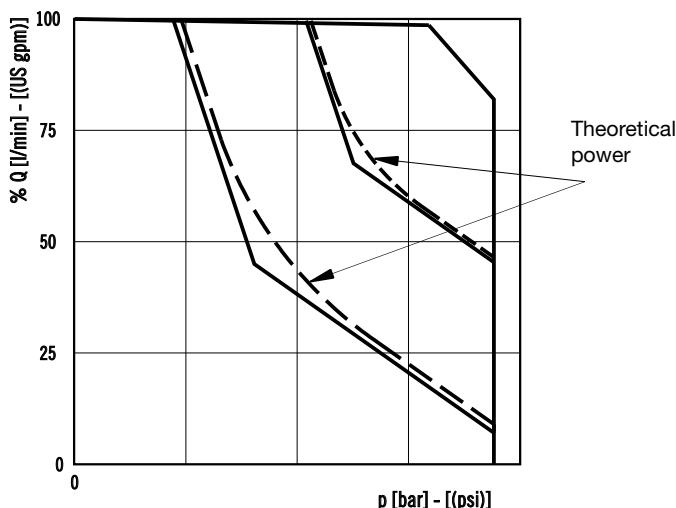

Not included in supply

NOTES

X: Load-sensing port. Dimensions at page 38 ÷ 40.
 Please contact us for more information.

OPERATING CURVES

VALVE FEATURES

Valve code	Arrangement	Voltage
1	Normally closed	12 V DC
2	Normally closed	24 V DC
6	Normally open	12 V DC
7	Normally open	24 V DC

Connector type	DIN 43650 DEUTSCH DT04-2P
----------------	------------------------------

05/10/2014

HIGH PERFORMANCE TORQUE LIMITER

RN3

Regulates the pump displacement according to the system pressure, to maintain the pre-adjusted torque value and protect the prime mover from overload.

This version is optimized for LS systems. With the standard torque limiter RN0, in case of a high flow through the LS main valve the torque absorbed by the pump can be slightly lower than the pre-adjusted torque value, resulting in a lower flow. The RN3 version grants the pre-adjusted torque value even at high flow through the LS main valve.

To have the best torque limiter regulation, the pre-adjusted absorbed torque has to be higher than the value shown in the following table.

Pump type	Min. torque Nm (lbf in)	Min. power (●) kW (HP)
MVP30	45 (398)	7.1 (9,5)
MVP48	61 (540)	9.6 (12,9)
MVP60	97 (859)	15.2 (20,4)

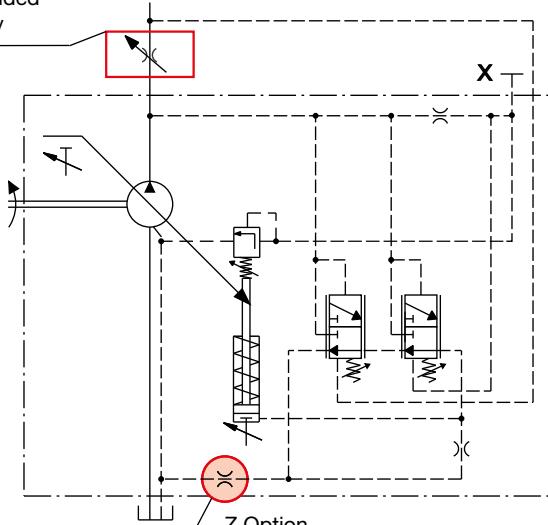

(●) @ 1500 min⁻¹

For lower torque setting values, the regulator limits the maximum working pressure to a value lower than the standard setting for the pressure regulator 280 bar (4060 psi).

When ordering the torque limiter please specify the requested value of torque [eg. 70 Nm (620 lbf in)] or the requested power and speed [eg. 10 kW (13.4 HP) at 1500 min⁻¹].

RN3 - Special version

Not included
in supply

Z Option
(See page 41 for more information)

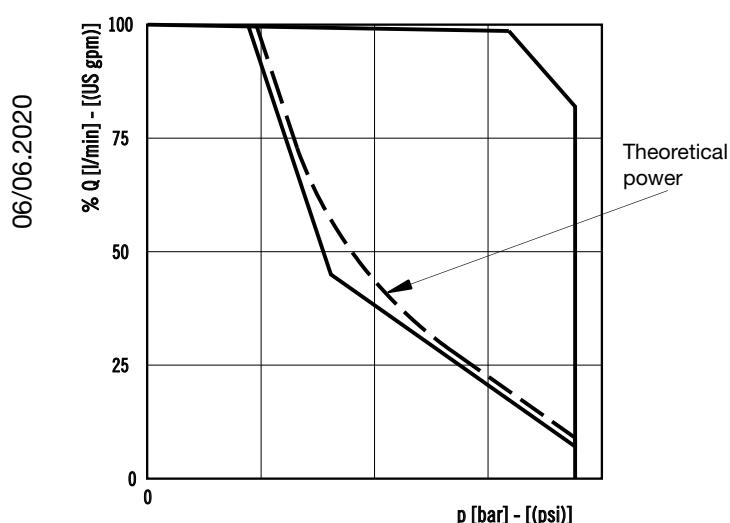

NOTES

X: Load-sensing port. Dimensions at page 38 ÷ 40.

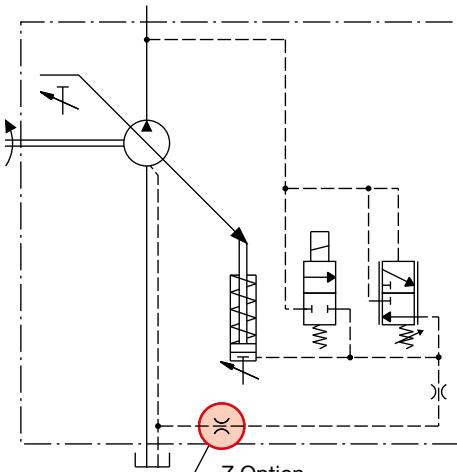

Available with or without pressure compensator RP.

Please contact us for more information.

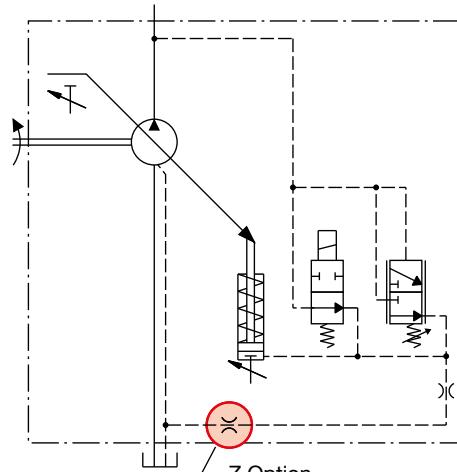

OPERATING CURVES

UNLOADING VALVE

U..**NC** (normally closed)**NA** (normally open)

(See page 41 for more information)

(See page 41 for more information)

With the valve NC type (normally closed), energizing the solenoid valve the displacement is reset and the pump is unloaded.

With the valve NA type (normally open), energizing the solenoid valve the pump works at the maximum displacement.

NOTES

Available without pressure compensator RP.

Connector type: DIN 43650.

Please contact us for other connectors and more information.

MULTIPLE PUMPS WITH THROUGH DRIVE

THROUGH DRIVE

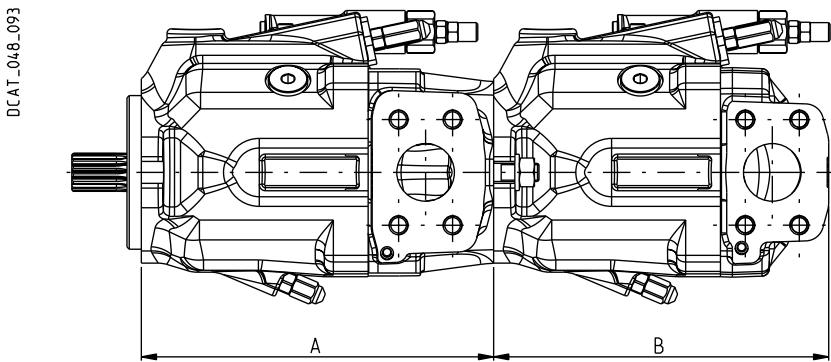

MVP through drive axial piston pumps offer the flexibility to obtain different groups able to supply several hydraulic systems. The operating characteristics of each assembled pumps are the same as the corresponding single pumps according to the following conditions:

- 1) Do not exceed the maximum transmissible torque.
- 2) The maximum rotational speed is that of the lowest rated speed of the single unit incorporated.

M	Nm (lbf in)	Torque
V	cm ³ /rev (in ³ /rev)	Displacement
Δp	bar (psi)	Pressure
$\eta_{hm} = \eta_{hm}(V, \Delta p, n)$		Hydro-mechanical efficiency

$$M = \frac{\Delta p \text{ (bar)} \cdot V \text{ (cm}^3\text{/rev)}}{62,83 \cdot \eta_{hm}} \quad [\text{Nm}]$$

Notes: The torque absorbed from the shaft of the first pump results from the sum of the torques due to all the single stages. The achieved value must not exceed the maximum torque limit given for the shaft of the first pump.

A: Front section (through drive)

B: MVP Rear pump (the same of single pump with side or rear ports)

Gear rear pump are also available, please see the respective technical catalogues.

HOW TO ORDER MULTIPLE PUMPS - PISTON PUMP/GEAR PUMP

Replaces: 06/06/2020

Code	Torque limiter setting (#)	13
... Please specify the requested torque value in Nm		
Code	Second torque limiter setting (#)	14
... Please specify the requested torque value in Nm		
Code	Torque limiter setting speed (#)	15
... Please specify the requested speed value		

O

Omit code only if ordering assembled multiple pumps

- (#) Only for torque limiter. Refer to page 67 for more information. Write these codes at the end only if ordering assembled multiple pumps
- (a) KAPPA 20 gear pumps: displacements on page 22, 26 and 30. For more information, please see the respective technical catalogue
 - (b) POLARIS PH gear pumps: displacements on page 23, 27 and 31. For more information, please see the respective technical catalogue
 - (c) Drive shafts availability at pages 32 ÷ 35 and mounting flanges availability at pages 36 ÷ 37

ORDER EXAMPLE

Common inlet double pump MVP 60 with RN1 torque limiter-internal pilot + PHP20 gear pump.
